

## AMENDMENTS TO THE CLAIMS

What is claimed is:

1. (Currently Amended) A method of servicing content for delivery to a client device, said method comprising:

receiving a request for an item of content at a portal;

identifying a type of service to be performed on said item of content, wherein said type of service to be performed is derived from said request for said item of content, and wherein said item of content is identified during a session involving said client device;

sending a message associated with said request from said portal to a service location manager;

using, at said service location manager, an estimate of resources associated with performing said service to select a provider from a plurality of providers capable of performing said service;

sending a second message from said service location manager to said portal, wherein said second message comprises information for locating and contacting said provider;

sending a third message from said portal to said client device comprising information for locating and contacting said provider; and  
providing information for transferring said session to said provider, wherein said provider performs said service on said item of content upon being transferred said session.

2. (Original) The method of Claim 1 wherein said resources comprise estimated computational resources associated with performing said service.

3. (Original) The method of Claim 2 wherein said selecting comprises:  
maintaining a record comprising resources available at each of said providers; and  
selecting said provider according to said record.
4. (Original) The method of Claim 1 wherein said resources comprise estimated bandwidth associated with said session.
5. (Original) The method of Claim 4 wherein said selecting comprises:  
maintaining a record comprising bandwidth available to each of said providers; and  
selecting said provider according to said record.
6. (Original) The method of Claim 1 wherein said selecting comprises:  
maintaining a record comprising providers to which sessions have been transferred; and  
selecting said provider according to said record.
7. (Original) The method of Claim 1 further comprising:  
estimating an amount of time said session is expected to remain with said provider.
8. (Original) The method of Claim 1 further comprising:  
receiving an indication from said provider that said service is completed.
9. (Original) The method of Claim 1 wherein said transferring comprises:

sending information for locating said provider to said client device, wherein said client device and said provider transparently establish communication.

10. (Original) The method of Claim 1 further comprising:  
identifying a source of said item of content, wherein data for said item of content are streamed from said source to said provider and wherein service result data are streamed from said provider to said client device.

11. (Currently Amended) A method of managing providers that service content for streaming to a client device, said method comprising:  
receiving a request for an item of content at a portal;  
identifying a type of service to be performed on an item of content,  
wherein said type of service to be performed is derived from said request for  
said item of content, and wherein said item of content is identified during a session involving said client device;  
sending a message associated with said request from said portal to a  
service location manager;  
maintaining, at said service location manager, a record comprising resources associated with a plurality of providers capable of performing said service; [[and]]  
selecting a provider from said plurality of providers based on information in said record, wherein said session is transferred to said provider;  
sending a second message from said service location manager to said  
portal, wherein said second message comprises information for locating and  
contacting said provider;

sending a third message from said portal to said client device comprising  
information for locating and contacting said provider;

streaming said item of content from , wherein data for said item of  
content are streamed from a source to said provider  
streaming and wherein service result data are streamed from said provider to  
said client device.

12. (Original) The method of Claim 11 wherein said maintaining comprises:  
estimating resources associated with performing said service; and  
updating said record to reflect a change in resources associated with  
said provider based on said provider performing said service.

13. (Original) The method of Claim 11 further comprising:  
providing information for transferring said session to said provider.

14. (Original) The method of Claim 11 wherein said resources comprise  
estimated computational resources associated with performing said service.

15. (Original) The method of Claim 11 wherein said resources comprise  
estimated bandwidth associated with said session.

16. (Original) The method of Claim 11 wherein said record comprises a list  
of providers to which sessions have been transferred.

17. (Original) The method of Claim 11 further comprising:  
estimating a duration of said session.

18. (Original) The method of Claim 11 further comprising:  
receiving a signal from said provider after said provider performs said service.

19-25. (Cancelled)

26. (Currently Amended) A system for streaming content to a client device, said system comprising:

a service manager for receiving a request for an item of content from a portal, wherein said portal received said request from said client device, wherein said service manager is also for selecting a provider from a plurality of providers, each provider capable of performing a service on said item of content, wherein said service manager maintains a record comprising resources associated with said providers and wherein said service manager uses an estimate of resources associated with performing said service to select said provider according to information in said record, wherein a service location manager sends a second message to said portal, wherein said portal sends a third message to said client device comprising information for locating and contacting said provider, wherein data for said item of content are streamed from a source to said provider and wherein service result data are streamed from said provider to said client device.

27. (Original) The system of Claim 26 wherein said service manager updates said record to reflect a change in resources associated with said provider based on said provider performing said service.

28. (Original) The system of Claim 26 wherein said resources comprise estimated computational resources associated with performing said service.

29. (Original) The system of Claim 26 wherein said resources comprise estimated bandwidth available to said provider.

30. (Original) The system of Claim 26 wherein said record comprises information showing which of said providers are performing a service.

31. (Original) The system of Claim 26 wherein said service manager estimates an amount of time for said provider to perform said service.

32. (Original) The system of Claim 26 wherein said service manager receives a signal from said provider after said provider performs said service.

33. (Currently Amended) A computer-readable medium having computer-readable program code embodied therein for causing a computer system to perform a method for servicing content for delivery to a client device, said method comprising:

receiving a request for an item of content at a portal;

identifying a type of service to be performed on said item of content,  
wherein said type of service to be performed is derived from said request for  
said item of content, and wherein said item of content is identified during a  
session involving said client device;

sending a message associated with said request from said portal to a service location manager;

using, at said service location manager, an estimate of resources associated with performing said service to select a provider from a plurality of providers capable of performing said service;

sending a second message from said service location manager to said provider, wherein said second message comprises information enabling said provider to establish communication with said client device; and providing information for transferring said session to said provider, wherein said provider performs said service on said item of content upon being transferred said session.

34. (Original) The computer-readable medium of Claim 33 wherein said computer-readable program code embodied therein causes said computer system to perform said method further comprising:

maintaining a record comprising resources available at each of said providers; and

selecting said provider according to said record.

35. (Original) The computer-readable medium of Claim 33 wherein said computer-readable program code embodied therein causes said computer system to perform said method further comprising:

maintaining a record comprising bandwidth available to each of said providers; and

selecting said provider according to said record.

36. (Original) The computer-readable medium of Claim 33 wherein said computer-readable program code embodied therein causes said computer system to perform said method further comprising:

maintaining a record comprising providers to which sessions have been transferred; and

selecting said provider according to said record.

37. (Currently Amended) A computer-readable medium having computer-readable program code embodied therein for causing a computer system to perform a method for servicing content for streaming to a client device, said method comprising:

receiving a request for an item of content at a portal;  
identifying a type of service to be performed on an item of content,  
wherein said type of service to be performed is derived from said request for  
said item of content, and wherein said item of content is identified during a  
session involving said client device;

sending a message associated with said request from said portal to a  
service location manager;

maintaining, at said service location manager, a record comprising  
resources associated with a plurality of providers capable of performing said service; [[and]]

selecting a provider from said plurality of providers based on information in said record, wherein said session is transferred to said provider;

sending a second message from said service location manager to said  
provider, wherein said second message comprises information enabling said  
provider to establish communication with said client device;

~~streaming said item of content from, wherein data for said item of content are streamed from a source to said provider; and streaming and wherein service result data are streamed from said provider to said client device.~~

38. (Original) The computer-readable medium of Claim 37 wherein said computer-readable program code embodied therein causes said computer system to perform said method further comprising:

estimating resources associated with performing said service; and  
updating said record to reflect a change in resources associated with said provider based on said provider performing said service.

39. (Original) The computer-readable medium of Claim 37 wherein said record comprises a list of providers to which sessions have been transferred.

40. (Original) The computer-readable medium of Claim 37 wherein said computer-readable program code embodied therein causes said computer system to perform said method further comprising:

estimating a duration of said session.
